

The truth behind all of the lung issues from “vaping”:

“Contaminant found in marijuana vaping products linked to deadly lung illnesses, tests show.

State and federal health officials investigating mysterious lung illnesses linked to vaping have found the same chemical in samples of marijuana products used by people sickened in different parts of the country and who used different brands of products in recent weeks.

The chemical is an oil derived from vitamin E. Investigators at the U.S. Food and Drug Administration found the oil in cannabis products in samples collected from patients who fell ill across the United States...

That same chemical was also found in nearly all cannabis samples from patients who fell ill in New York in recent weeks, a state health department spokeswoman said.”

To date there have been no confirmed cases of this acute lung damage from electronic nicotine delivery systems (ENDS). The ENDS industry is heavily regulated by the FDA, unlike the black market THC industry. We highly recommend if you purchase black market THC cartridges that you stop for your own safety.

At responsible vape shops we only sell high quality products that do not contain fatty oils that produce or contain vitamin E.

If you or a loved one have any questions or concerns about ENDS products please don't hesitate to call or stop by in order to discuss these issues in greater detail.
